MET-VET

Metacognition for Environmental Thinking in VET

Metacognition for Environmental Thinking Competence Framework

Contains core metacognitive competences needed to foster environmental thinking, including: *Planning*, *Reflection*, *Critical Thinking*, *Holistic View*, *Problem Solving*, *Mental Scripting*, *Active Involvement* and *Behaviour Change*.

Metacognition for an Environmental Approach to VET

An online course for VET learners and teachers supporting the development of the metacognitive competences and fostering environmental awareness in VET. Comprises 7 Modules evolved around core metacognitive competences with videos, infographics, self-assessment tools, and bits of information.

VET Reflective Digital Story Library and Creation Guide

A digital tool allowing learners to mirror their learning process into engaging stories. With the creation guide, learners are supported in story creation and encouraged to publish their story making it open for other users to read it and learn from each others' experiences.

VET Metacognition Change Management Toolkit

Provides key resources for VET centres to support the green transition and integration of environmental metacognition into VET environments. The toolkit is based on the qualitative and quantitative research carried out in partners countries, along with experience gained during the project lifetime.

Visit our **platform** and become a part of the MET-VET community to jointly foster the green transition in VET!
